The following steps can be used to connect to the wireless "guest" network using the Windows wireless configuration utility in Windows 7:

1. Open the Network and Sharing Center window by right-clicking on the wireless icon next to the clock on your system tray (shown below) and selecting **Open Network and Sharing Center**.

   (Alternatively, you can also access the Network and Sharing Center by clicking **Start > Control Panel > Network and Sharing Center** or **Start > Control Panel > Network and Internet > Network and Sharing Center**.)

2. Click **Manage wireless networks**, located in the left-hand menu and then select **Add** at the top left of the window.
3. When asked **How do you want to add a network?**, select **Manually create a network profile**.
4. Enter the following information for the wireless **guest** network:
   1. **Network name**: guest
   2. **Security type**: No authentication (Open)
   3. Check the box to **Start this connection automatically** (optional, but recommended)

5. Click **Next** and then **Close**
6. You should now be connected to the wireless guest network.
