CHM 2045 - ALEKS PREP COURSE

What is ALEKS?
ALEKS stands for Assessment and Learning in Knowledge Spaces. It is a personalized adaptive learning tool that works to understand what you know, what you don’t know, and what you are most ready to learn. ALEKS then creates a personalized learning plan that gets you to the finish line in the most efficient way. You may have already used it in math courses.

Why do I have to use it in CHM 2045?
General chemistry is recognized as one of the most difficult courses at the university. As such, the chemistry department has designed a preparatory course to make sure all students have the prerequisite skills necessary to be successful in CHM 2045. The ALEKS prep course is a graded component of your CHM 2045 course (See CHM 2045 Syllabus for grading details). The deadline to complete the ALEKS preparatory course is the end of the second week of classes: 11:59 p.m. on 09/01/19.

How do I start?
If you have not already done so, you should consult the “ALEKS Prep Course” Canvas course for directions on how to register and get started. Once you register, you will take a brief tutorial on how to use the system.

Next, you will complete an Initial Knowledge Check. Take the ALEKS Knowledge Checks honestly and seriously so that the system can accurately measure your knowledge of course material. If you don’t, you will only be giving yourself more work!

What if I have more questions?
Your CHM 2045 instructor is NOT in charge of the ALEKS prep course, please direct all questions concerning ALEKS to: alekschemistry@unf.edu
